Promoting excellence in cleft care

CLEFT REGISTRY & AUDIT NETWORK

Cleft Registry and Audit NETWORK Database
Part of the Clinical Effectiveness Unit, of the Royal College of Surgeons of England

2024 Annual Report
Results of the registry and audit for children born with a cleft in England, Wales, Northern Ireland and Scotland

On behalf of the Cleft Development Group

Annual Report 2024

CRANE is a national registry and clinical audit. It evaluates and reports on the delivery of cleft services to children born with a cleft lip and/or palate in England, Wales, Northern Ireland and Scotland. Registry information is presented for children born in 2021-2023 and audit outcomes at 5 years of age are presented for children born in 2015-2017.

Registry information

24,877 children have been registered, over the last 24 years, since 2000.
859 children were registered in 2023.

78% of babies with cleft lip were diagnosed antenatally, while 74% of babies with cleft palate alone were diagnosed within 24hrs of birth.

82% were referred to a cleft team within 24hrs of birth and 94% were contacted within 24hrs of referral.

Distribution of cleft type

CP	CL	UCLP	BCLP	SMCP	SMCP+CL
43%	26%	21%	9%	<2%	<1%

88% of families had a verified consent status, 85% consented and 3% declined consent.

Audit outcomes at 5 years of age

83% of children with a cleft had a healthy BMI. 3% were underweight, 9% were overweight and 5% were obese.	57% of children with a cleft affecting the palate had speech comparable to their peers. Children with a cleft palate (CP) alone had better outcomes than those with a cleft affecting the lip and palate.
62% of children with a cleft had no decayed, missing or filled teeth (dmft=0), compared to 77% of their non-cleft peers.	82% of children with a cleft had 'Strengths and Difficulties' scores in the low/normal range, compared to 90% of their non-cleft peers. Furthermore, 92% of families were screened at least once before the target age of 6 years.
52% of children with a complete unilateral cleft lip and palate (UCLP) had scores reflecting good dental arch relationships.	

Development work

Deprivation according to postcode records For the first time, postcodes were used to assign deprivation scores to 88% of CRANE-consented children born 2014-2023. We found that babies with a cleft were no more likely to live in the most deprived areas than babies born in the general population. However, the percentage of children with a cleft living in the most deprived quintile areas varied between Cleft Services from 11% to 47%.	Newborn Hearing Screening Programme (NHSP) data linkage CRANE-consented children were linked to the NHSP at the individual-level to report on their diagnostic audiology assessments. 61% of children with a cleft had a diagnostic test: 1 in 4 had conductive hearing loss, and 1 in 25 had permanent hearing loss.

Cleft palate detection time by extent of cleft involvement

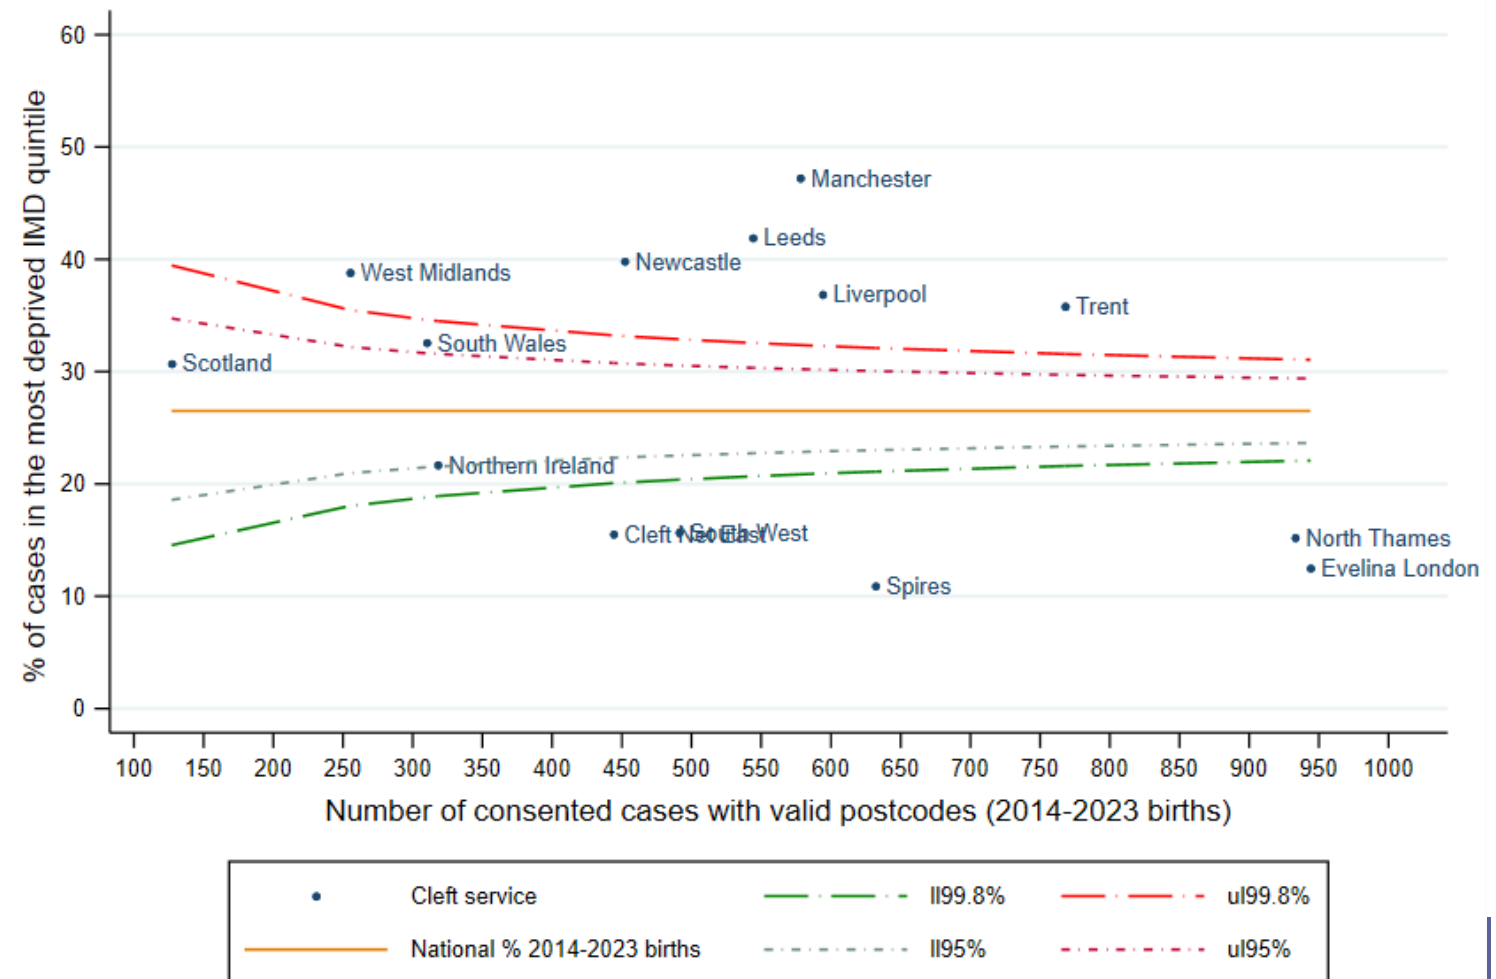

Development work: Socioeconomic deprivation

- Children with a cleft (2014-23 births) are no more likely to live in the most deprived quintile areas than babies in the general population.

Development work: Socioeconomic deprivation

- Children with a cleft (2014-23 births) are no more likely to live in the most deprived quintile areas than babies in the general population.
- % of children from the most deprived areas varied between Cleft Services (11%-47%).
- We know dental outcomes are strongly related to deprivation.
- Risk-adjustment of outcomes should include IMD, based on postcode.

Note 1. Data from Wales, Scotland and Northern Ireland based on their country-specific deprivation measures.

Development work: Hearing status

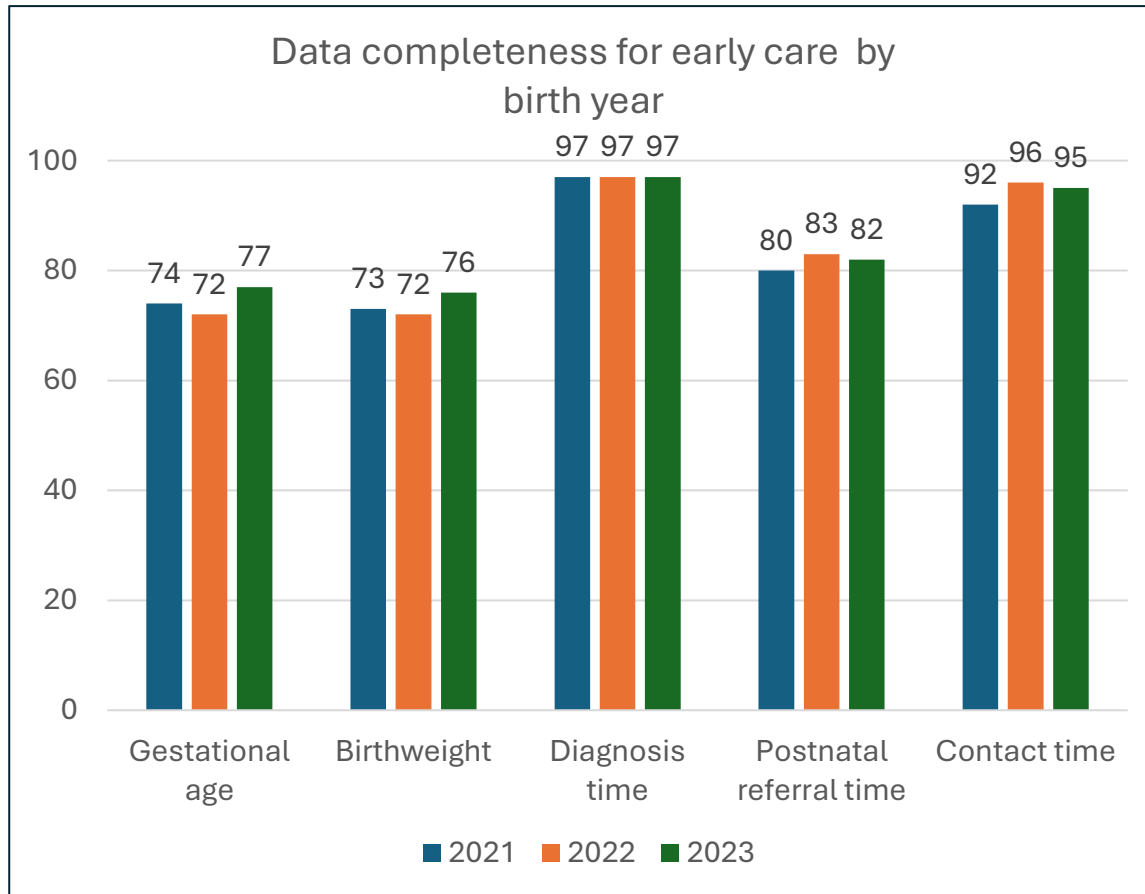

- 7,116 (61%) children with newborn hearing screen had diagnostic audiology assessment (2006-21 births)
 - 29% with CL
 - 72% with CP+/-L (benchmark is 100%)
- 3,351 (47%) had satisfactory hearing
- 2,721 (38%) had hearing loss identified
- 268 (4%) had permanent hearing loss
- 12% with clear response on newborn hearing screen had conductive loss identified at diagnostic assessment.

Palate examination: Identification of cleft palate in the newborn - best practice guide **update 2025**

Retain the 6 recommendations for visual examination, torch & spatula, repeat if not visualised, recording, informing parents, Hospital Trusts responsibilities for training

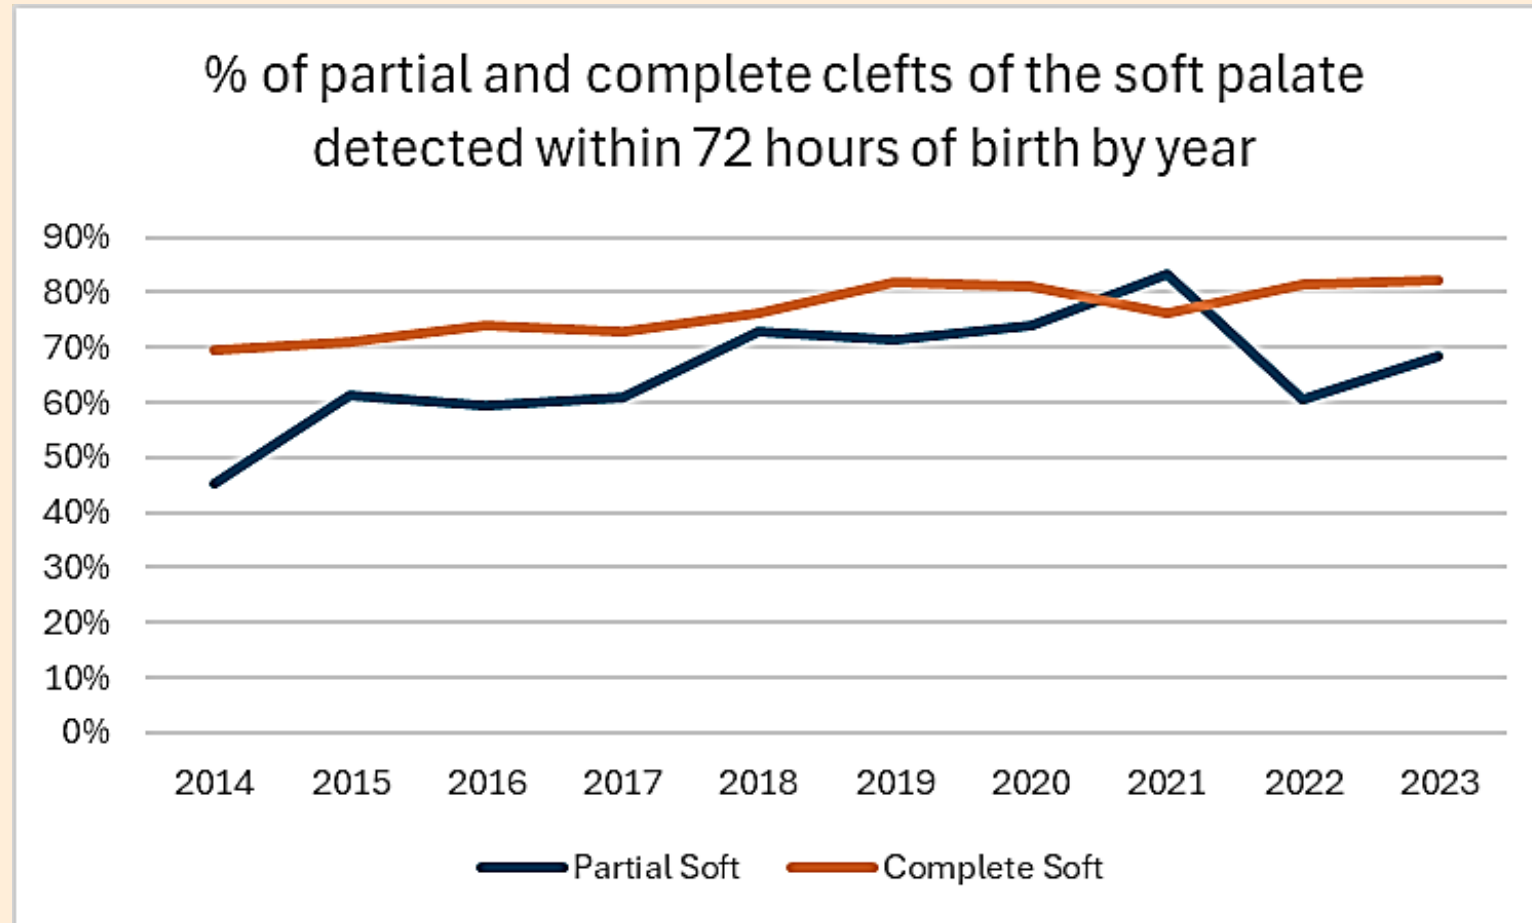

Widening the circle of professionals to educate include 6-8 week check by GP's, also HV's

Patient Information Leaflet replaced by CLAPA Guide to CLP and NHS Overview of CLP, plus or minus local centre's leaflets as CNS's advise

CRANE: CPO soft palates 2014-2023

Ahah, a progress marker! Then a stutter in 22-23?

Life size models newborn clefts (2015)

Survey of use of cleft models in GBI (Cathy Marsh, Alex Habel, in November 2023)

13 centres: 12 responded

4 used monthly

3 used sporadically

Review November 24. In the past 12 months

3 have added the models to their teaching programme

CNS responses to using models

- *Learners get the message quickly*
- *Inexperienced students in particular understood.....*
- Had them 10 months now, *using them every chance I get....*
- Great value *once it's stressed finger palpation not advised*
- *Models rarely used, as it's necessary to deter palpation*
- *Initially feared that using them might lead to using fingers!*
- **CNS share your recent experiences today?**

Hammering down on delayed detection: Lets be Nailing it!

Crane Presentation 2025

Marnie Fullarton

North-West Cleft Network -Liverpool

CRANE

CRANE Date Collection

- Creation of New Baby database-includes all data parameters
- CRANE form to audit clerk simplified
- Louise Hall has access to Crane

Consent

- Entered onto New Baby database –date taken
- Entered into dictated letter if obtained

Reducing late diagnosis

- Cleft Awareness and palate examination
- Education in maternity units
- Education in neonatal units Liverpool & Manchester
- Education in Health Visitor Teams
- Midwifery students Edge Hill and John Moores
- E learning module examination palate RCPCH

Emma Blair, Leeds

Consent

- Achieving 100% consent verification for 2015-2017 births and high positive consent rate (179 eligible children. 178 consented, 1 declined)
 - At this time, paper nursing records were used in Leeds.
 - CRANE information & consent forms were prepared with nursing documentation and available for every patient contact.
 - CRANE discussed in person, the paperwork left with parents to review and complete in their own time and then consent obtained on a subsequent home visit. Consent was obtained early on.
 - Possibly parents at that early stage were still very thankful for information and were keen to give back to service. Seemed to be less anxiety about sharing data during that time.
 - Since our move to electronic documentation, it is not as easy to collect consent quickly.

Emma Blair, Leeds

Early care data completeness & contact with families

- High data completeness rates for early life/care indicators (gestational age, birthweight, diagnosis time, contact time)
 - Nursing documentation is designed to collect all necessary CRANE data.
 - Boxes asking for specific information is more likely to be completed than free text.
 - We have a very good audit coordinator, Rachel Dalton, who prompts us for data ad inputs everything.
- High rate of contact within 24hrs of referral
 - Always prioritised
 - On call weekends and bank holidays
 - Rearrange diaries to accommodate new babies.

NEWCASTLE CLEFT
TEAM

20 JANUARY 2025

Positive Outlier

Consent
verification for
2015-2017 births

Data completeness
for all 5-year
outcomes

Audit Built into Service

- Data Coordinator
 - Patients approaching 5 years of age
 - Identified well in advance
 - Brought back to clinic early (e.g. 5 years 1 month)
 - Reinvited if don't attend
 - Clear on clinic list which patients are for audit
 - Pre-labelled audit forms are readily available
 - Team chased / reminded to complete audit forms
-

Teamwork

- Team invested in audit process
 - Stable, well motivated team
 - Good team communication
 - informal
 - formal (twice monthly MDT)
 - Audit part of MDT agenda
-

Thank you

- Any questions?
-

Achieving High Data Completeness for 5 year growth outcomes and DMFT Scores

CRANE – Making it better – 20th January 2025

Emma Macartney– Lead Nurse for Regional Cleft Services
Denise Scallon – Regional Cleft Co-ordinator

Northern Ireland Regional Cleft Team
Royal Belfast Hospital for Sick Children
BT12 6BE

5y height and weight

- SCN ensures attendance at each 5year clinic
- SCN is on schedule for all patients to see
- SCN completes all heights and weights and asks parent/carer if any other new diagnosis
- SCN inputs all data and checks if 1year outcomes added
- If 1year outcomes are added at under age 1(from 6m) SCN checks with local Child Health Office if child had age 1 health assessment completed by Health Visitor and updates accordingly

(SCN adds preliminary 1year outcomes at Early Intervention clinic which all children with CPO attend from age 6m)

DMFT Scores

- In July Cleft Co-ordinator creates spreadsheet of next year's age 5 patients and starts planning MDT appointments after their 5th birthday in the year ahead
- At MDT Clinic Consultant Dental complete Age 5 Audit CRANE sheet on each child with excellent return rate of DMFTs and DDE scores
- Within following week, Cleft Co-ordinator and Consultant Dentist meet and input CRANE data together to ensure information is accurate when still fresh in Consultant's mind
- On Cleft Co-ordinator spreadsheet, all of patients' DDE, DMFT and overjet measurements are recorded along with details of dental photos and models taken. This is on one view which enables Cleft Co-ordinator to ascertain which patients have been completed and if any awaiting their clinic appointment ensuring therefore they will not breach into 6th birthday

Thank you for listening

Any questions?

Implementation of plans to overcome challenges facing the West Midlands Cleft Service

Imogen Underwood (Lead Audit and Governance)
& Natalie Matthews (Service Manager)

January 2025

Improvement Plans

- Trial & implement 5 year audit clinics
- Identify patients suitable for 'audit clinic'
- Continued role – governance audit lead
- Implement robust SOP for updating consent status
- Data coordinator to be appointed
- Implementation of new EPR system & plans to update/incorporate database

Achievements

- Successfully trialled 5yr audit clinic in February 2024 & 6 further audit clinics in 2024
- Use of audit data collection proforma
- Combined total for 5yr audit clinics in 2024 (data sets completed for all patients) **73 booked / 69 seen (4 DNAs)**
- Planned 8 audit clinics for 2025 **80 patients**
- Detailed Consent SOP written – awaiting divisional governance sign off
- Consent for 2015-2017 births improved **< 60% to almost 80% consent**
- Data coordinator post written, evaluated and to be advertised this month
- EPR May 2024 – in talks with team on how to incorporate data collection

Future Plans

- Obtain consent status for ALL birth cohorts once consent SOP signed off
- Continue to collect datasets at 5yr audit clinics
- Improve efficiency of 5 year clinics, and enable handover to DC
- Continue to identify missing/incomplete data when inputting 5yr data sets & complete where possible
- Continue to check consent status on outpatient attendance and when submitting dashboard data
- Work with epic team to ensure data needs are met and we have robust systems in place to help achieve this
- DC role fixed term for 12 months – they will lead on crane data collection / missing & incomplete data during this period

Psychology (SDQ)	--*

2024 Report

Difficulties faced in submission of data to CRANE

- No audit clinics for 2015 births due to covid-19 pandemic.
- Limited number of audit clinics for 2016 and 2017 births. Particular difficulty restarting in peripheral sites (Gloucester, Exeter, Plymouth, Truro).
 - 2016 births : approx. 35% of data collected
 - 2017 births : approx. 70% of data collected
 - 2018 births : approx. 71% of data collected
- Ongoing clinic capacity issues and backlogs, particularly in peripheral sites.
- Unclear responsibilities – data collected but not inputted.
- Clinic cancellations – MDT staff shortages.

Action taken to improve

Following SW Cleft service harm review (2022-2023), funding for a data manager (0.4wte) was allocated as part of large workforce planning package.

Thorough review of audit clinic processes including a review of audit forms.

Development of SOP for the whole MDT to ensure that responsibilities are clear.

Increased number of audit clinics in Bristol and all peripheral sites

Following recommendations from the harm review, we have increased our workforce to support the extra clinic activity.

Next steps

- We recognise that it will take time for improvements to show in CRANE reports given that there were gaps in data collection throughout pandemic and aftermath.
- We hope that workforce expansion and improvements in process will reflect positively through CRANE over the next couple of years.

Outcomes

Excluded from all 5-year outcomes:

1. Children who died before the age of 5 years.
2. Children with a submucous cleft palate.

Outcome specific inclusions:

5 year old index: eligible for children with a complete UCLP only.

Speech: eligible for non-syndromic children with CP, UCLP and BCLP only.

Children with anomalies affecting the circulatory system or nervous system only, which do not occur as part of a syndrome, are currently included in speech reporting.

Note that Psychology data reflect children with TIM scores.

Missing identifiers: Linkage and risk adjustment

Service-led registrations

- Database supplier is developing the system to allow Service-led registrations and approvals for CRANE Database access
- Cleft team member with existing access can request access for another Cleft team member by completing form on the database.
- Key people (e.g. Clinical Lead, Service Co-ordinator) will be notified automatically and they can approve the request.
- Access will be granted and username/pw sent to colleague.
- CRANE will be notified by email so records can be updated.

CRANE updates

- No preliminary report (replaced with webinar for CD/CLs – likely to be May ‘25)
 - Staff/resource changes
 - Live tables provide up to date consent and data completeness rates for indicators subject to outlier policy
 - Data exports allow gaps in registry data to be identified
 - Outlier process allows early sight (August) of funnel plots and supplementary tables
- Introduction of risk adjustment to some outcomes (speech, dental)
- Formal introduction of outlier policy

Key dates

- Q& A webinar: **Wednesday 5 February 2025**, 10:30-12:00
- Organisational audit: **February 2025**
- Dashboard Q3 24/25: **Friday 14 March 2025**
- CD/CL webinar: **May 2025** (Date to be confirmed)
- Annual Report Extract taken: **Sunday 29 June 2025**
- Dashboard Q4 24/25: **Friday 20 June 2025**
- Outlier policy letters sent to Clinical Directors: **August 2025**

Alert

- Please remember when contacting CRANE about a patient
 - **Only use CRANE ID**
 - Never send patient identifiable information to our contact us page or via email:
 - **NAME**
 - **DOB**
 - **HOSPITAL NUMBER**

Thank you
